

Beware of...

- Open book, vertical shear, posterior element disruption -> high propensity for vascular damage
- Foley placement with caution for urethral injury

Suspected Traumatic Pelvic Fracture

Fracture

Portable AP Pelvis XR

+ Fracture

Place binder to close an open pelvis

***** Patients who remain unstable despite resuscitation may have active arterial bleeding *****

Hemodynamically Unstable

- Volume resuscitation with trauma blood, consider TXA/AC reversal
- **IR** if isolated pelvic bleed
- **OR** if other operative (intraabdominal) injuries

IR Indications:
concern for pelvic bleed with no peritonitis, negative FAST, no laparotomy indications

OR Indications:
+Peritonitis, + FAST, other operative intraabdominal injuries

Hemodynamically Stable

- CT scan to assess for extravasation and other injuries
